- assembly and production facilities
- technical support
- industry-leading customer service

## More than 4.000 employees throughout the world

- create customer-oriented drive solutions

# MAXXDRIVE XT

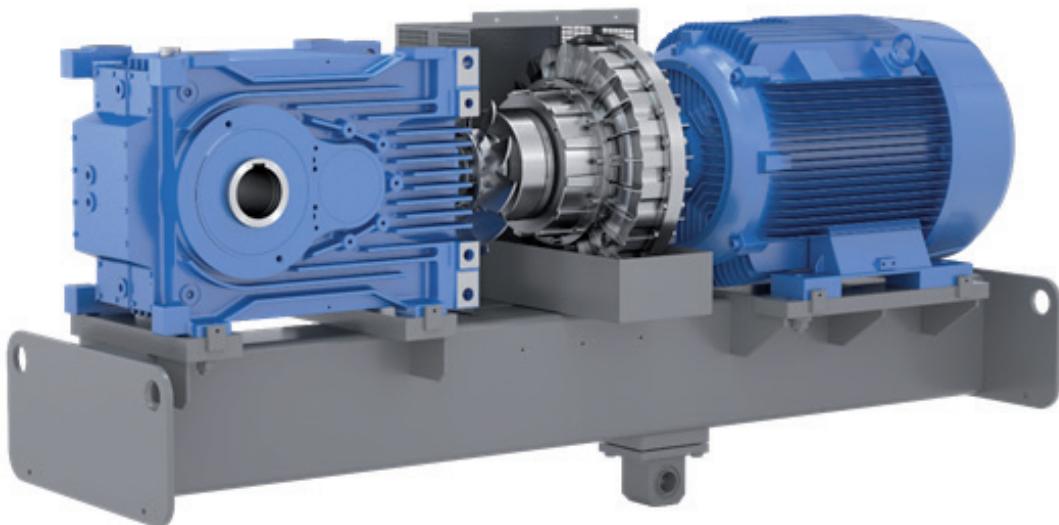

**MAXXDRIVE XT** Industrial Gear Unit series enlarges existing product portfolio by a variant with significantly increased thermal ratings.

This series has especially been developed for conveying applications. Its gear units can be equipped with all required options which are common for the application.

## Options

- Swing base / Base frame
- Fluid coupling / elastic coupling
- Brake (disc / drum)
- Motor
- IEC / NEMA Adapter

Reducers from MAXXDRIVE XT series are pure 2-stage bevel-helical gear units, available with ratios from 6.3 to 22.4.

Common base for this new product is the wellknown MAXXDRIVE Industrial Gear Unit series, many of its existing options will be used for MAXXDRIVE XT, too.

The heavily ribbed UNICASE housing has got distinctly bigger surface to lead away the losses. Integrated axial fan and optimized air flow of this series lead to multiple higher thermal ratings. Meaning in many cases such drive systems are able to operate without any additional external cooling.

#### Ratio area

#### high thermal ratings

- Use often without additional external cooling

Referring to information which are explicit not listed in this Technical Information, please see catalogue for Industrial Gear Units G 1050.

All main features from MAXXDRIVE series are naturally valid for XT-series also. Selection of MAXXDRIVE XT series is following same criteria which are listed in catalogue G1050.

#### Technical Informations

⇒ G1050

- also valid for

MAXXDRIVE XT-Serie

# Mounting Configuration

## Mounting position system

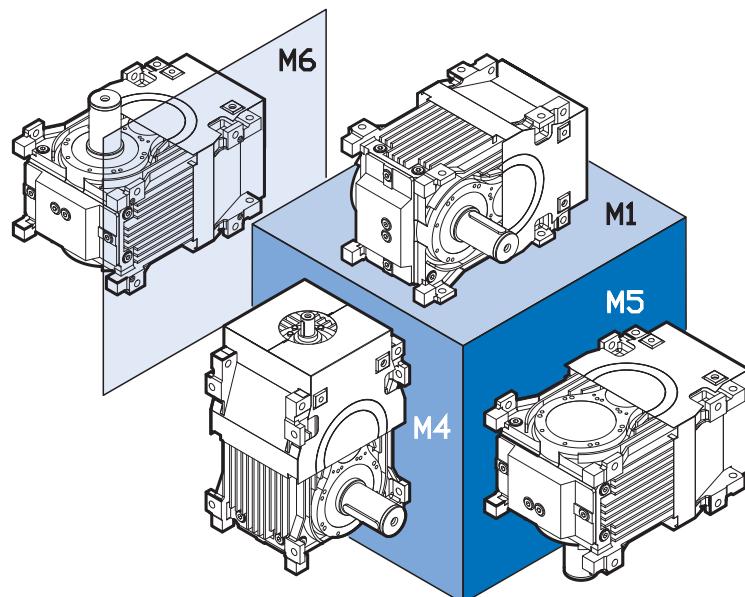

For gear units and gear motors, NORD DRIVESYSTEMS specifies between six installation positions from M1 to M6.

However, only the mounting positions M1, M4, M5 and M6 are permitted for 2-stage (industrial) bevel helical gear units.

The correct installation position must be specified when ordering.

## MAXXDRIVE XT 2-stage (industrial) bevel-helical gear unit

- M1** 2-Stage unit standard Installation
- M4** Output shaft located on lower end of gearbox
- M5** Output shaft facing downwards
- M6** Output shaft facing upwards

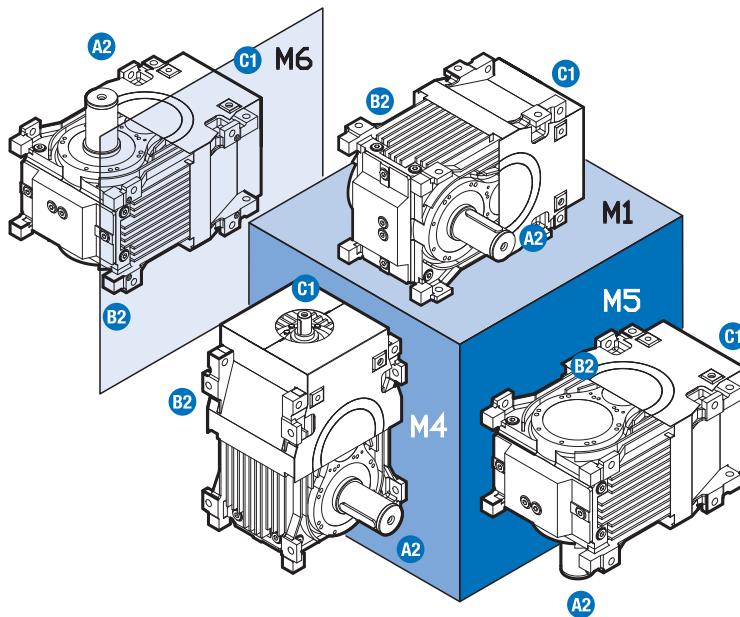

## Pivoted and Variable Mounting Positions

If you have any mounting requirements that vary from the standard positions, please consult NORD DRIVESYSTEMS.

NORD provides gearmotors, speed reducers and motors that can be configured very differently to suit customer needs. When ordering, it is beneficial that the drive be specified exactly the way you want it delivered.

**Mounting Configuration  
M1 - M6**

**Shaft Configuration  
C1, A2, B2**

**Position of Attachments  
C1, A2, B2**

## Shaft Configuration

The positions of the required shaft outlets are determined by viewing the gearbox from above in a default horizontal mounting position. M1 is the default (standard) for 2-stage parallel and 2-stage helical-bevel gear units.

## Position of Attachments

The positions of attached elements such as backstops, fans, flange-mounted pumps, drive flanges, agitator flanges etc. are determined according to the same principle as the shaft positions.

# Mounting Configuration

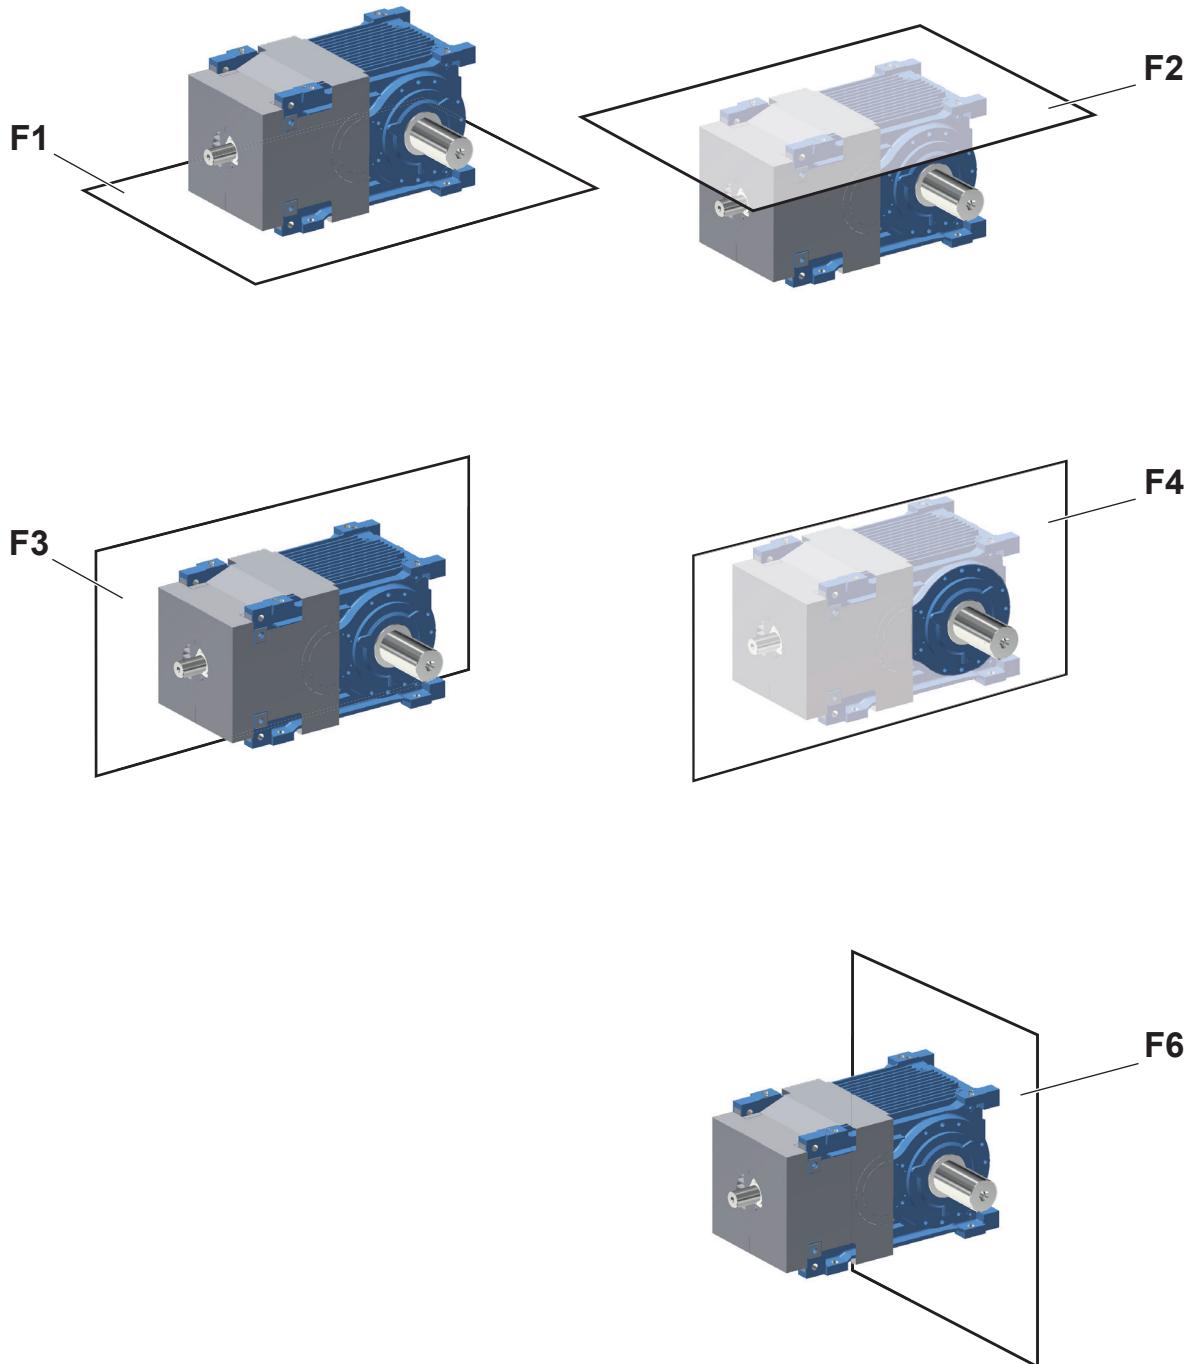

**NORD®**  
DRIVESYSTEMS

## Mounting Surfaces

The mounting surface specifies the side on which the gear unit is fixed. Five mounting surfaces are available based on the diagrams below (F1 - F6).

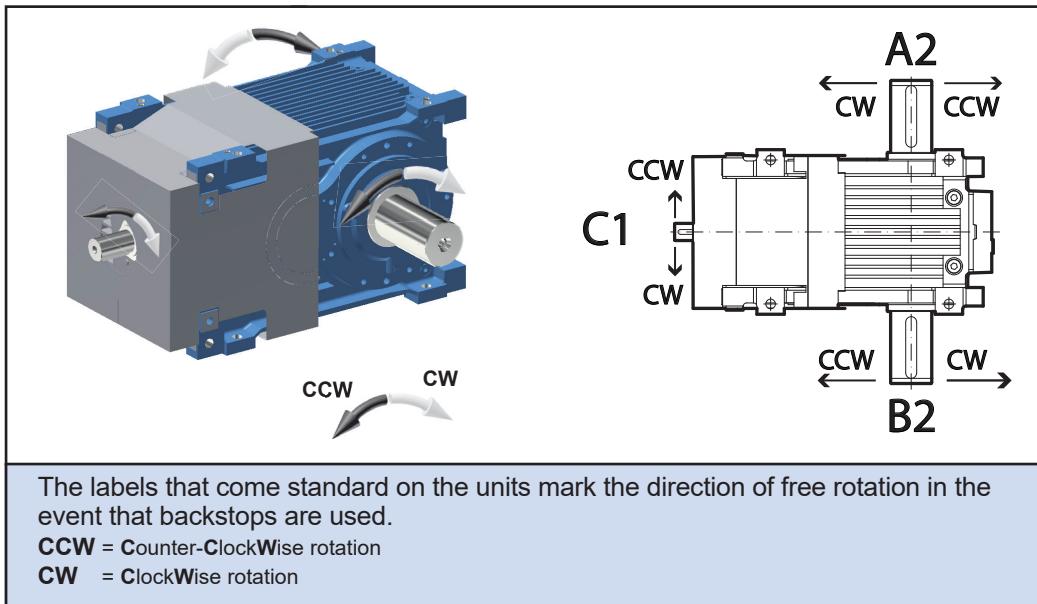

In the following diagram, the mounting surfaces for mounting position M1 are indicated.

## Rotation Direction of Input/Output shafts

The direction of rotation for the gearbox shafts are dependant upon the installation position and the shaft configuration.

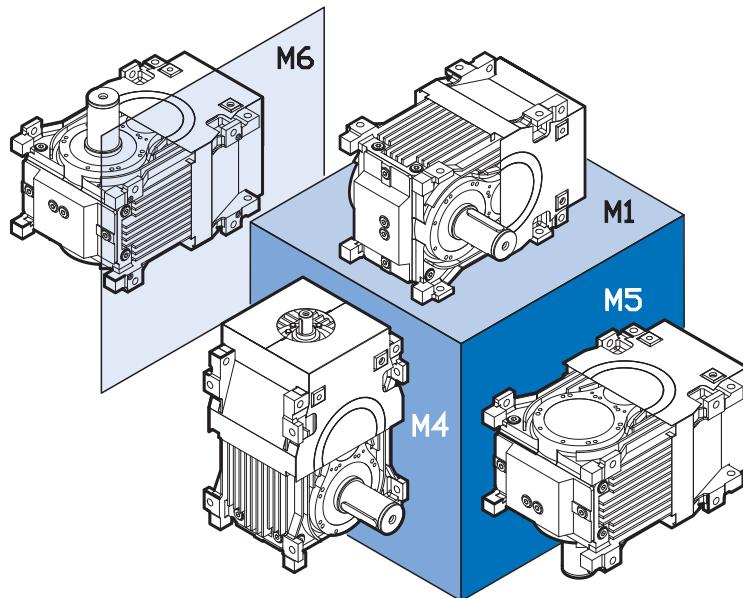

Installation position <sup>1)</sup> M1 Direction of view <sup>1)</sup> F2		Rotation Direction of Input			Rotation Direction of Output

3) Restriction in combination with shrink disc and fastener

## Hollow Shaft with Shrink disc and Shaft cover (ASH)

For gearbox versions with a hollow output shaft, the use of a shrink disc is advised. The customer's shaft length that may be inserted into the hollow shaft of the gearbox can be found  $\Rightarrow$  50-51.

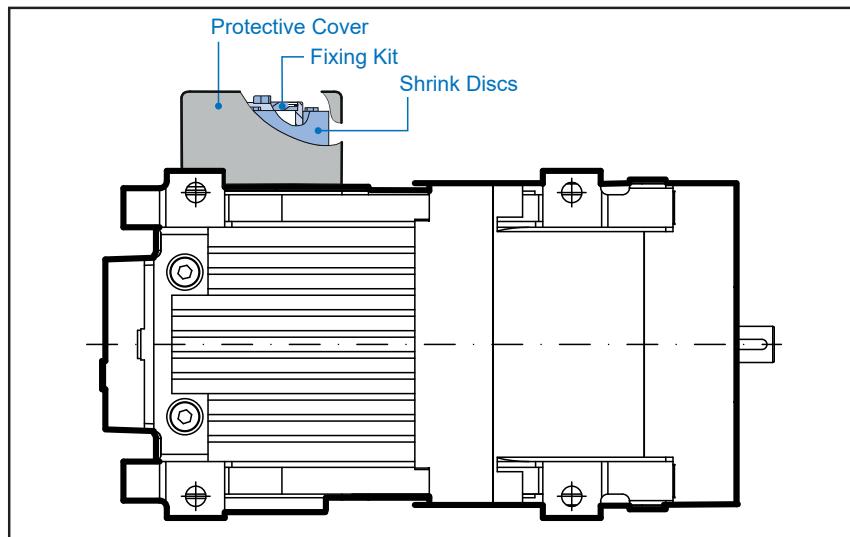

### Customer shaft

- Material
- Minimum yield strength  $R_e$

The diameter of the customer shaft should be according to ISO standard g6 ( $dk > 160\text{mm}$ ) & h6 ( $dk \leq 160\text{ mm}$ ). The material of the customer's insert must have a yield strength ( $R_e$ ) of at least: **52,260 psi (360 N/mm<sup>2</sup>)**. Due to the clamping force, this will ensure that no permanent deformation occurs.

$T_{2\max}$  = Maximum permissible drive torque

$s$  = Safety factor of the shrink disc for fi tclass g6 or h6 with  $T_{2\max}$

Gear Units	Size	Shrink disc			$s$	Clamping screw Number x Size
		$T_{2\max}$ [Nm]	$T_{2\max}$ [lb-in]			
SK 5217 ASH	130	15.000	132800	2,4		14 x M12
SK 6217 ASH	130	20.000	177000	1,8		14 x M12
SK 7217 ASH	160	27.000	239000	2,0		12 x M16
SK 8217 ASH	160	31.000	274400	1,9		12 x M16

SK 10217 ASH	190	53.000	469100	1,9		16 x M16
SK 11217 ASH	220	77.000	681500	2,3		16 x M20

## Hollow Shaft with Shrink disc (AS)

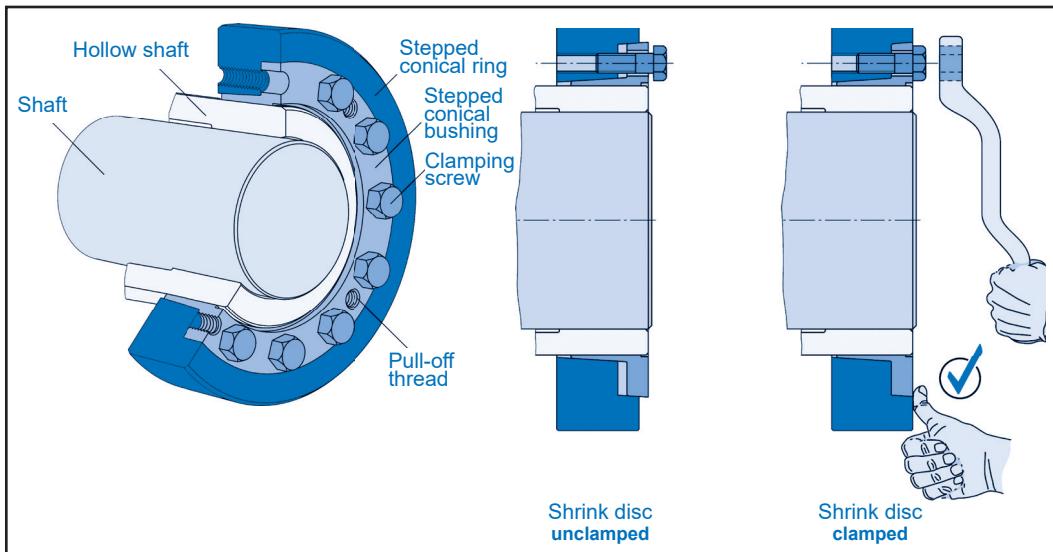

Image source: Fa. RINGSPANN GmbH

## Shaft Cover / IP66 Shaft Cover (H/H66)

The Shaft cover provides protection from rotating parts and the shrink disc when applicable.

The IP66 shaft cover provides the same protection from the shrink disc and rotating parts as well as being rated IP 66, which means that it is dust tight and capable of protecting against high pressure water jets.

## Backstops (R)

Optional backstops, which allow rotation in only one direction and block the other direction of rotation may be supplied. All backstops are mounted externally and are able to be changed without disassembly of the gear unit.

The lubrication of the backstop is provided by the oil from the gear reducer. The backstops lift off due to centrifugal force above a certain lift-off speed (see table) and are then free of friction.

Gear Units	Nominal Ratio $i_N$	Nominal Input Speed $n_1$ [rpm]
SK 5217	6,3 - 9	500
	10 - 14	810
	16 - 22,4	1309

	16 - 18	888
SK 10217	6,3 - 9	353
	10 - 14	545
	16 - 18	888
SK 11217	7,1 - 9	353
	10 - 14	545
	16 - 22,4	888

### IMPORTANT NOTE

Please contact NORD if the motor input speed is greater than 1800 rpm or less than 1000 rpm.

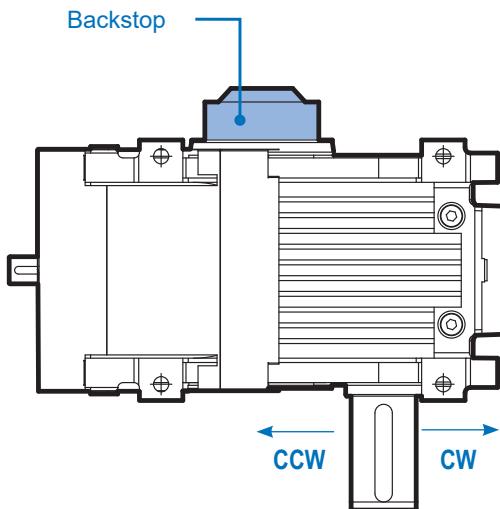

## Backstops (R) (rotation)

When ordering the backstop option, the direction of rotation must be specified. The direction of rotation is based upon looking directly at the drive shaft and specifying which direction you want it to turn.

- CW = Clockwise direction of rotation, Right-hand rotation
- CCW = Counterclockwise direction of rotation, Left-hand rotation

The position of the output shaft and the side on which the backstop is installed determine the direction of rotation. The direction of view for declaring the rotation direction is always towards the output shaft that is being specified.

### IMPORTANT NOTE

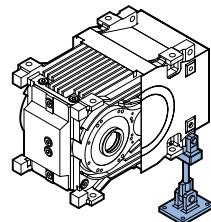

The backstops are designed for 1.8 times the rated gearbox torque ( $T_{2\max}$ ) with reference to the output shaft. If greater safety ratings are required, please consult NORD.

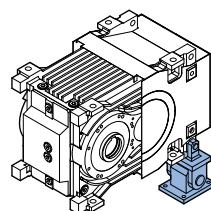

### IMPORTANT NOTE

Danger of failure and destruction. Check the direction of rotation of the motor and the gearbox before starting up your application. Arrows on the gearbox indicate the direction of rotation.

Standard Torque Support (D)

Elastic Torque Support (ED)

## Torque Support (D) (ED)

For shaft mounted versions of our hollow shaft gearboxes, torque supports are available. In addition to a simple torque support (D), NORD DRIVESYSTEMS offers a torque support with an integral elastic bushing (ED), which has better damping characteristics (vibration damping).

The torque support should be assembled on the machinery side, in order to keep the bending moment on the machinery shaft low. Loading under tension or compression and installation upwards or downwards are permissible. The torque support may only be installed closest to the input side, otherwise the permissible loading of the gear unit will be exceeded.

Preloading the torque support during installation or operation must be avoided, otherwise the life-span of the drive shaft bearings may be reduced. Torque supports are not suitable for the transmission of radial forces, therefore may only be used in direct-coupled applications that cannot transmit the specified radial forces.

### WARNING

The output torque must be limited to the values shown in the table below. If greater torque ratings are necessary, please consult NORD.

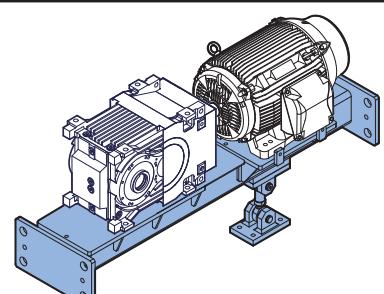

Gear units	M <sub>2max</sub> [kNm]		M <sub>2max</sub> [lb-in x 1000]]	
	Typ D	Typ ED	Typ D	Typ ED
<b>SK 5217</b>	15	15	132,76	132,76

<b>SK 11217</b>	75	75	663,81	663,81

## Motor Swing Base (MS)

The motor swing base is designed specifically for use with right-angle shaft mounted gear unit where the gearbox and motor are mounted on a common base frame. The torque is taken up via torque support or torque reaction arm.

Optional components (can be combined):

- Elastic coupling, fluid coupling
- Drum brake, disc brake
- Axial fan
- Auxiliary drive  
(with freewheel coupling, backstop, motor brake, etc.)
- Torque support, attachment plate

Motor Swing Base (MS) or Base Frame (MF)

## Motor Base Frame (MF)

Motor base frames (or motor bases) are similar to a motor swing base except the entire base frame is intended to be foot mounted to the supporting machine structure.

## Swing Base with Brake (MS.B)

## Base Frame with Brake (MF.B)

A motor swing base or base frame can be supplied with an optional disc or drum brakes installed between the motor and the gear unit.

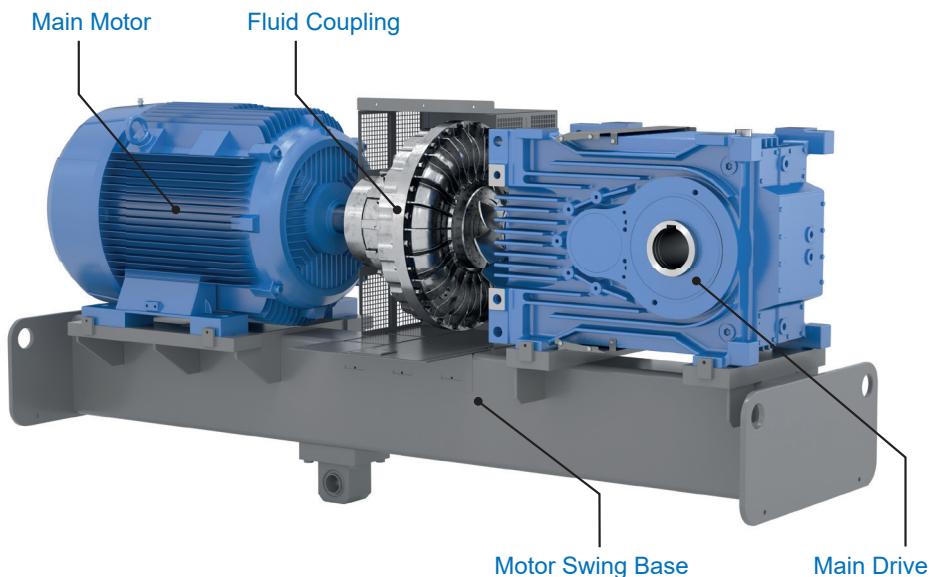

For applications with a relatively high external moment of inertia ( $maf > 2$ ), as often the case with travelling drives, slewing gear, turntables, gate drives, agitators and surface ventilators, it is recommended that a brake torque be selected that is no greater than 1.2 times the nominal torque of the motor.

When a higher brake torque is required this must be considered in the selection of the gear unit. Please consult NORD DRIVESYSTEMS. Also contact NORD DRIVESYSTEMS if an output-side brake is necessary.

## Motor Swing Base and Motor Base Options (MSK, MST, MFK, MFT)

Both the motor swing base and the motor base are commonly supplied with either an elastic input coupling or a fluid coupling. In addition, many drive packages require a brake between the motor and the input-side of the reducer. The most common motor swing base or motor base options may be specified as follows:

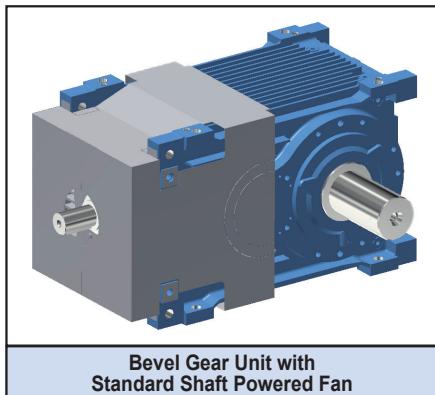

Description	Option Code
Swing base with elastic coupling	MSK
Motor base with elastic coupling	MFK
Swing base with elastic coupling and brake	MSKB
Motor base with elastic coupling and brake	MFKB
Swing base with fluid coupling	MST
Motor base with fluid coupling	MFT
Swing base with fluid coupling and brake	MSTB
Motor base with fluid coupling and brake	MFTB

# Gear Unit Options

**NORD®**  
DRIVESYSTEMS

Bevel Gear Unit with  
Standard Shaft Powered Fan

## standard

- very powerful,  
integrated axial fan  
including cover

## huge cooling effect

- in one turning direction only

The direction of  
rotation when ordering!

## Gearbox Cooling Using a Fan (FAN)

Through the use of fans, the thermal power capacity of the gearbox may be increased substantially. The fan cover provides protection against contact and guides the flow of cooling air over the gearbox housing.

The MAXXDRIVE XT gearbox is equipped as standard with a very powerful, integrated axial fan including cover.

This axial fan is directly connected to the input shaft of bevel-helical gearbox. During operation it provides an enormous air flow.

In combination with fan cover and thermal optimized gearbox housing an extraordinary cooling power will be created for MAXXDRIVE XT gear units.

The intake of air may be supplied in a radial direction which allows a brake or a fluid-coupling to be installed directly in front of the fan (see motor swing bases).

The huge cooling effect can be created in one turning direction only, therefore the direction of the rotation must be specified when ordering the unit. Further information is available upon request.

## Installation conditions for fans

An adequate supply of air to the fan must be ensured, the vent grill in the fan cover must be kept clear.

**NORD DRIVESYSTEMS Group**

**Headquarters and Technology center**  
in Bargteheide, Germany, close to Hamburg

**Innovative drive solutions**  
for more than 100 branches of industry

**Mechanical products**  
parallel shaft, helical gear, bevel gear and worm gear units

**Electrical products**  
IE2/IE3/IE4 motors

**Electronic products**  
centralised and decentralised frequency inverters,  
motor starters and field distribution systems

**Seven state-of-the-art production plants**  
for all drive components

**Subsidiaries and distributors**  
**in 98 countries on 5 continents**  
provide local stocks, assembly, production,  
technical support and customer service

**More than 4.000 employees throughout the world**  
create customer oriented solutions
